

INCUS is a future mission by NASA to study why convective storms, heavy precipitation, and clouds occur exactly when and where they form.

Overview

The spacecraft is 3 CubeSats funded and developed by NASA & JPL (Jet Propulsion Laboratory) alongside Colorado State University and NOAA. It is one of NASA's Earth Ventures Missions (EVM-3). Its main goal is to enhance our understanding of why, when & where tropical convective storms form, to measure vertical air motion and why only a few storms produce extreme weather. It will be launched by Firefly Aerospace. It is a Class-D mission.

Instruments

It will have Ka rain radars and a MW radiometer.

Budget

The mission will cost around 177 million dollars.
