

This list of extraterrestrial orbiters is a listing of spacecraft that achieved an extraterrestrial orbit.

Legend

Sun

The first artificial object to orbit the sun is the Luna 1. The spacecraft was originally designed to intentionally crash into the moon, and, after missing its target in 1959, inadvertently became the first human-made object to ever leave Earth's orbit and circle around the Sun, where it remained to this day.

Moon

Mars

Venus

Jupiter

Saturn

Mercury

Minor planets and comets
