

This is a list of all spacecraft landings on other planets and bodies in the Solar System, including soft landings and both intended and unintended hard impacts. The list includes orbiters that were intentionally crashed, but not orbiters which later crashed in an unplanned manner due to orbital decay.

Colour key:

Planets

Mercury

Venus

Mars

Jupiter

Jupiter is a gas giant with a very large atmospheric pressure and internal temperature and thus there is no known hard surface on which to "land". All missions listed here are impacts on Jupiter.

Saturn

Saturn is a gas giant with a very large atmospheric pressure and internal temperature and thus there is no known hard surface on which to "land". All missions listed here are impacts on Saturn.

Planetary moons

Earth's Moon

Moons of Saturn

Titan

Other bodies

Asteroids

Comets
