

Feeding the Machine: The Hidden Human Labour Powering AI is a 2024 book by James Muldoon, Mark Graham and Callum Cant.

Writing

The authors developed the concept for the book while doing fieldwork studying data annotation in developing countries in East Africa.

Synopsis

The book examines the human input needed to develop and sustain AI ecosystems.

Reception

The book received positive reviews. Rosalie Waelen of *Capital & Class* gave it a mostly positive review. Tim Hornyak of *Literary Review* praised it.

Kirkus Reviews called it "A sobering and timely—if sometimes distracted—study of AI.". Publishers Weekly gave the book a starred review, writing that "The grim real-life stories read like dystopian parables, such as the account of a European voice actor whose recordings were legally used without her consent to create an inexpensive synthetic clone whom she now competes with for business. Driven by striking reporting and finely observed profiles, this unsettles."
