

Generative AI pornography, is pornographic content that is produced uses generative AI technology. It may include, allusions towards animation, literature, video games, and other forms of popular culture. The content may depict softcore pornography, including lascivious behavior, or more explicit material depicting sexual intercourse and erotic art. Such material may be original characters, or real people through deepfakes.

Functions and production strategies

AI pornography platforms, beyond account creation and social media linking, primarily enable users to generate sexual images through feature selection or text prompting. Users can customize bodies, clothing, and sociodemographic traits, and browse categorized galleries of user-generated content. Several sites also support short pornographic videos or GIFs and modification tools such as nudifiers, deepfakes, and facemorphing. Some platforms enable fine-tuning of parameters such as settings, style, or theme, and provide prompt enhancers or suggestions to improve outputs. Users may edit generated images, refine prior prompts, modify others' work, or upload personal material as a basis, with iterative and collaborative content creation. Some websites additionally host interactive "erobots," customizable in real time for appearance, personality, memories, speech, and profession, enabling tailored sexual and non-sexual interactions. Less common features include VR integration, AI porn games, audio or doodle prompts, and consensual replication of individuals with verification.
