

HKChat (Chinese: 港話通) is a large language model-based chatbot developed by HKChat OmniServe Limited (Chinese: 港話通全維服務有限公司) in Hong Kong.

History

The public beta version of HKChat was released on 20 November 2025. However, it was not released without instability and hallucinations.

In June 2026, the Hong Kong Generative AI R&D Center announced the use of new HKGAI V3 LLM in HKChat.

Models

HKChat is based on the HKGAI V3 model developed by the Hong Kong Generative AI R&D Center (Chinese: 香港生成式人工智能研發中心), which is essentially the localized DeepSeek model trained with Hong Kong data and values.

The HKGAI V3 model also forms the base of HKGAI product offerings that includes but are not limited to HKPilot (Chinese: 港文通), HKMeeting (Chinese: 港會通), LexiHK (Chinese: 港法通) and HKEcoLink (Chinese: 港環通).

Usage

HKChat is designated to answer questions related to daily life in Hong Kong while being capable of providing preliminary legal advice and translating texts in English and Chinese.
