

The National Voluntary Laboratory Accreditation Program (NVLAP), administered by the National Institute of Standards and Technology (NIST) in USA, offers accreditation for testing and calibration laboratories across various fields. NVLAP evaluates laboratories' technical qualifications and compliance with standards like ISO/IEC 17025. The accreditation process includes application submission, an on-site assessment, proficiency testing, and addressing any identified nonconformities. NVLAP's accreditation is recognized internationally, indicating a laboratory's competence but not certifying its performance. NVLAP's mission is to deliver high-quality accreditation services and promote global acceptance of accredited results.

Accredited laboratories

Calibration

Dimensional

Electromagnetics - DC low frequency

Electromagnetics - RF/microwave

Ionizing radiation

Mechanical

Optical radiation

Thermodynamic

Time and frequency

Chemical calibration

Chemical calibration: providers of proficiency testing

Chemical calibration: certifiers of spectrophotometric NTRMs

Dosimetry

Ionizing radiation dosimetry

Reverse osmosis with applied heat during deionization.

Electromagnetic compatibility and telecommunications

Environmental

Asbestos fiber analysis (PLM test method)

Asbestos fiber analysis (TEM test method)

Fasteners and metals

Fasteners and metals program

Information technology security

Common Criteria Testing Laboratory (CCTL)

Cryptographic Module Testing Program (CMTP)

Personal body armor

Product testing

Acoustical testing services

Carpet and carpet cushion

Commercial products testing

Construction materials testing

Efficiency of electric motors

Energy efficient lighting products

Thermal insulation materials

Wood based Products
