

Phi is a series of large language models developed by Microsoft that are open-weights and can run locally on one's device.

The initial version, Phi-1, released in June 2023. Phi-3 was released in April 2024.

Phi-4-reasoning-vision-15B was released in March 2026.

The New York Times considered Phi-3-mini to be Microsoft's push into smaller large language models. Phi-3-mini has 3.8 billion parameters. Phi-3-mini has been compared to GPT-3.5 in terms of capability.

History

On June 21, 2023, Microsoft released Phi-1 with 1.3 billion parameters.

In April 2024, Microsoft released Phi-3-mini as an open-weights model with 3.8 billion parameters. Phi-3-mini is capable of running on a phone.

In March 2026, Phi-4-reasoning-vision-15B was released, with the capability of deciding when to reason.

Models

Phi-3-mini

Phi-3-mini was released in April 2024. It has 3.8 billion parameters and it was released into Azure. It is also capable of running on a phone.

The New York Times considered Phi-3-mini to be Microsoft's push into smaller language models. WIRED and Ars Technica considered Phi-3-mini to be of similar quality to GPT-3.5.

Phi-4-reasoning-vision-15B

Phi-4-reasoning-vision-15B was released in March 2026. It is capable of deciding when to provide a reasoning process before answering the user prompt, and when to skip reasoning.

It has 15 billion parameters, and is a vision-language model.
